Statement of the Problem

For the past 15 years, the number of youth entering the juvenile justice system has increased exponentially. This is due to a variety of factors, including the lack of resources and support for at-risk youth, as well as the increasing number of youth who are being referred to the system by law enforcement agencies. The result is a significant increase in the number of youth in juvenile detention facilities across the country.

According to the National Institute of Justice, there were approximately 300,000 youth in juvenile detention facilities in 2010, up from about 150,000 in 1990. This represents a 100% increase in just two decades.

There are many reasons why this trend is occurring. One reason is the lack of effective prevention programs for at-risk youth. Another reason is the lack of resources and support for youth who are already involved in the juvenile justice system.

The result is a significant increase in the number of youth in juvenile detention facilities across the country.

At the earliest possible juncture, the availability of individualized treatment plans, and research findings, is the most important intervention strategy for at-risk youth.

This project aims to address this issue by providing a comprehensive approach to youth development and rehabilitation.

The project will focus on three main areas: prevention, intervention, and reentry.

Prevention will involve the development of community-based programs that provide youth with the skills and resources they need to succeed.

Intervention will involve the development of individualized treatment plans for youth who are already involved in the juvenile justice system.

Reentry will involve the development of programs that help youth transition back into society successfully.

The project will also include a research component to evaluate the effectiveness of the interventions.

The goal of the project is to reduce the number of youth in juvenile detention facilities and to provide them with the skills and resources they need to succeed.

The project will be implemented in three phases: planning, implementation, and evaluation.

The planning phase will involve the development of a comprehensive plan, including the identification of key partners, the development of a budget, and the selection of a team of experts.

The implementation phase will involve the development of individualized treatment plans for youth who are already involved in the juvenile justice system.

The evaluation phase will involve the evaluation of the effectiveness of the interventions.

The project will be evaluated using a variety of methods, including surveys, interviews, and case studies.
