## STANDARD OPERATING PROCEDURES

# DIVISION OF COMPARATIVE MEDICINE UNIVERSITY OF SOUTH FLORIDA

SOP#: 1102.5 Date Issued: 5/99 Date Revised: 5/16 Page 1 of 3

TITLE: SurgiVet ™ Anesthesia Machine SCOPE: Research and Animal Care Personnel,

**RESPONSIBILITY:** Facility Manager, Technical Staff, and Professional &

Administrative Staff

**PURPOSE:** To Outline the Proper Procedures for Use and Maintenance of

Veterinary Inhalation Anesthesia Equipment

#### I. PURPOSE

1. Isoflurane inhalation provides safe general anesthesia for a variety of animal species. This procedure outlines the use and maintenance of a veterinary inhalation anesthesia machine that incorporates an oxygen flowmeter, anesthetic vaporizer, and a circle re-breathing system with carbon dioxide absorption.

#### II. RESPONSIBILITY

- 1. The Facility Manager ensures that equipment is appropriately cleaned, maintained in good working order, and available for research personnel as requested.
- 2. The veterinary professional, administrative, and managerial staff ensure that all research and technical staff using this equipment are adequately trained and experienced to perform veterinary inhalant general anesthesia.
- 3. The veterinary and technical staff operating this equipment ensure this procedure and the manufacturer's operation manual are followed.

### III. EQUIPMENT SET- UP

- 1. Check that machine is connected to oxygen supply that is turned on and has an adequate supply at 50-55 psi.
- 2. Check the operation of the flow meter.
- 3. Check that vaporizer is adequately filled.
- 4. Check breathing circuit configuration and connections.
- 5. Check the scavenger system. Charcoal canisters should be weighed and replaced as recommended by the manufacturer.
- 6. Check ventilator function and connections.
- 7. Pressure test the machine as described in the operation manual.

- 2. Monthly when unit is in-service or prior to use if frequency of use is less than monthly.
  - a. Ventilator supply hose, bellows housing, and bellows should be cleaned with mild soapy water (e.g., Dawn®, chlorhexidine) rinsed well and dried completely before reassembly.
  - b. Visually inspect bellows diaphragm, flutter valve, and ring seal.
- 3. Record date, initial, and circle the appropriate maintenance interval on the anesthetic machine hang tag to indicate that all items/actions for that interval were completed.
- 4. Consult operation manual for trouble shooting and corrective actions.
